

**AMENDMENTS TO THE SPECIFICATION**

Please replace the paragraph beginning at page 7, line 18, with the following rewritten paragraph.

-- In the antenna unit 2 of the present embodiment the frequency range for which the flat antenna 11 can be used may be expanded, by variably controlling the matching frequency of the flat antenna 11 based on the reception channel selection signal S1 from the receiver 15, This frequency range for which the flat antenna 11 can be used may be expanded even if the matching frequency band to which the flat antenna 11 is tuned is narrow, or even if the matching frequency band to which the flat antenna 11 is tuned is outside of the used frequency band, the frequency range for which the flat antenna 11 can be used may be expanded. --
